The N73 engine also has variable valve lift (valvetronic), which varied intake valve opening lift from 0.30-9.85 mm (0.01-0.39 in), according to engine speed and load. Each cylinder head has a valvetronic assembly – including a motor, control module and position sensor. The N73 was superseded by the BMW N74, a twin-turbocharged V12 engine.

### **BMW N42 Four Cylinder Valvetronic Engine**

In early model BMW's, such as our favorite E30 M3, engine timing adjustments had to be done by hand with a special tool. The crankshaft was responsible for spinning gears which spins the cams which controls timing. Because of this, you were limited to either low end torque or high end power, but it was [...]

In 2001, BMW introduced a revolutionary timing and air intake control system for the engine. Valvetronic had its debut in the N42 3-series E46 4-cylinder engine. Work on this solution has been carried out since the 1990s, testing various concepts. Finally, the following "architecture" was decided:

### **BMW N46 - Wikipedia**

The Valvetronic system on your bmw is a variable valve lift setup which, in combination with variable valve timing, allows the intake valve timing to be infinitely adjustable. The electric valvetronic motor was first on normally-aspirated engines but is now common on the turbocharged vehicles as well.

### **BMW Valvetronic Variable Valve Lift**

Nearly all new BMW engines, including turbos, are Valvetronic. Because the intake manifold of a turbocharged engine is always above atmospheric pressure, Valvetronic doesn't offer as big an advantage as in naturally aspirated engines. But it improves throttle response because the time taken for the turbo to pressurise the intake tract is reduced.

### **What is Valvetronic? BMW's Innovative Throttle System**

Valvetronic is, most probably, the most hated hub of the BMW engine. In the same time, it's "last hope" of the engine repair specialists – if they are not able to find the cause of the problem, most probably, Valvetronic will be the one to blame.

### **Valvetronic | Bimmerpros.com**

Valvetronic is a variable lift and timing feature/system in BMW engines that controls the timing of the intake and exhaust valves opening and closing to optimize performance, and it ultimately decreases reliance on the car's throttle body.

### **Home - BimmerMILVs**

Valvetronic is BMW's latest answer to variable valve timing. Valvetronic engines use an extra set of rocker (intermediate) arms, positioned between the valve stem and the camshaft. These intermediate arms are able to pivot on a central point, by means of an extra, electronically actuated camshaft (eccentric shaft).
