Early Harrison L5 (9") Lathe - Page 1. Instead of being fabricated from heavy sheet steel (as on all later versions) the stands on early machines were either full length and made of cast iron or, more commonly, with a box-section cast-iron plinth under the headstock end of the bed and a simple leg under the tailstock.

I just purchased a Harrison L5 lathe like this one, these are stock pics... no actual pictures yet: ... It may well be a L5 rather than an L5A, but whatever it is it was purchased for the headstock bore as much as anything. The gear drive headstock is a plus. The 2 HP motor along with a VFD may be just fine, but I have a 3 HP motor if I need it.

Named after its swing of 140 mm (11 inches) the Harrison 140 was produced late in the life of the L5A/11-inch series. The lathe was mechanically identical to the earlier machines except for a squared-off headstock which may have contained slightly altered gear ratios. The front of the headstock was flat and carried a large rectangular plate on...
