### What is relativity? Einstein's mind-bending theory explained

The equations on which the theory of relativity is based are due to Lorentz, but Einstein connected them with his general principle, namely, that there must be nothing, in observable phenomena, which could be attributed to absolute motion of the observer.

### What is theory of relativity? - Definition from WhatIs.com

For objects travelling near light speed, however, the theory of relativity states that objects will move slower and shorten in length from the point of view of an observer on Earth. Einstein also derived the famous equation,  $E = mc^2$ , which reveals the equivalence of mass and energy.

### The Einstein Theory Of Relativity

General relativity is a theory of gravitation developed by Einstein in the years 1907–1915. The development of general relativity began with the equivalence principle, under which the states of accelerated motion and being at rest in a gravitational field (for example, when standing on the surface of the Earth) are physically identical.

Relativity is a term that can make many things work. If a planet is 100 million light years away we assume that light takes 100 million years to get from that planet to earth. Einstein said that at the speed of light time stands still so from the light's view, it would take zero time to get here!

### The Einstein Theory of Relativity - Gutenberg

Albert Einstein's theory of relativity is actually two separate theories: his special theory of relativity , postulated in the 1905 paper, The Electrodynamics of Moving Bodies and his theory of general relativity , an expansion of the earlier theory, published as The Foundation of the General Theory of Relativity in 1916.
