The Embedded Pcs Isa Bus

ISA stands for Industry Standard Architecture. Most PCs contain ISA slot on the main board to connect either an 8-bit ISA card or a 16-bit ISA card. 32-bit cards are PCI cards. The ISA bus has evolved from its original 8-bit standard to 16-bit standard available in most PCs today. It operates at 8.33MHz. Its...

The PC/104 bus - PC/104 and Small Form Factors

The ISA bus is controlled by an Atmel AVR microcontroller. The emulation has been restricted to I/O functions, because in current applications, only modest I/O cards and PC/104 modules are to be supported. The ISA emulator is a PC/104 module: The ISA slot platform allows for inserting up to three vintage ISA cards:

Personal Computer PC-AT Bus Description and ISA Pinout

The ISA card is a fairly trivial piece of hardware, using I/O ports or memory-mapping only. In this case, it is pretty likely an USB-to-ISA or PCI-to-ISA adapter will work. It is, however, also pretty likely a modern PCI-express or USB replacement is cheaper, thus rendering the adapter useless.

These nodes can be simple, like a standard I/O device, or complex, like an Embedded PC with a customized CAN bus interface. All nodes are connected through a two-wire circuit and single cable bus. Although CAN comes in both high- and low-speed, high-speed CAN is typically used in Automotive and Embedded Applications.

The ISA bus - the original bus used in PC/104 - is still going strong. In contrast to the design challenges posed by PCIe and PCI, the ISA bus is extremely easy to design with, making it not only possible to easily design your own I/O board, but also to purchase a wide variety of I/O boards from vendors who also continue to benefit from the simplicity of ISA.

PC/104 Consortium technical update: Stackable PCs from ISA ...

The PC/104 bus is, in essence, the ISA bus from the IBM personal computer AT and XT days. It is derived from the PC/AT (16-bit) and PC/XT (8-bit) bus specifications. The popularity of the PC/104 form factor is due to its compact board size, the incorporation of a mature open standard bus protocol (the ISA bus), and the vast number of diverse PC/104 modules available from a multitude of vendors.
